1 # 1. Density coner plot

A sample is 1 parameter set scanned. For the corner plot below, the quantiles (represented by the solid lines) are 0.16,0.5,0.84 of the samples. Dots represent individual samples (outside the line surrounding 0.84 of the samples) The parameter search is performed in the transformed space of x_c/η, β/η, x_c^2/ϵ, x_c but we also show the regular parameters

```
(25,)
```
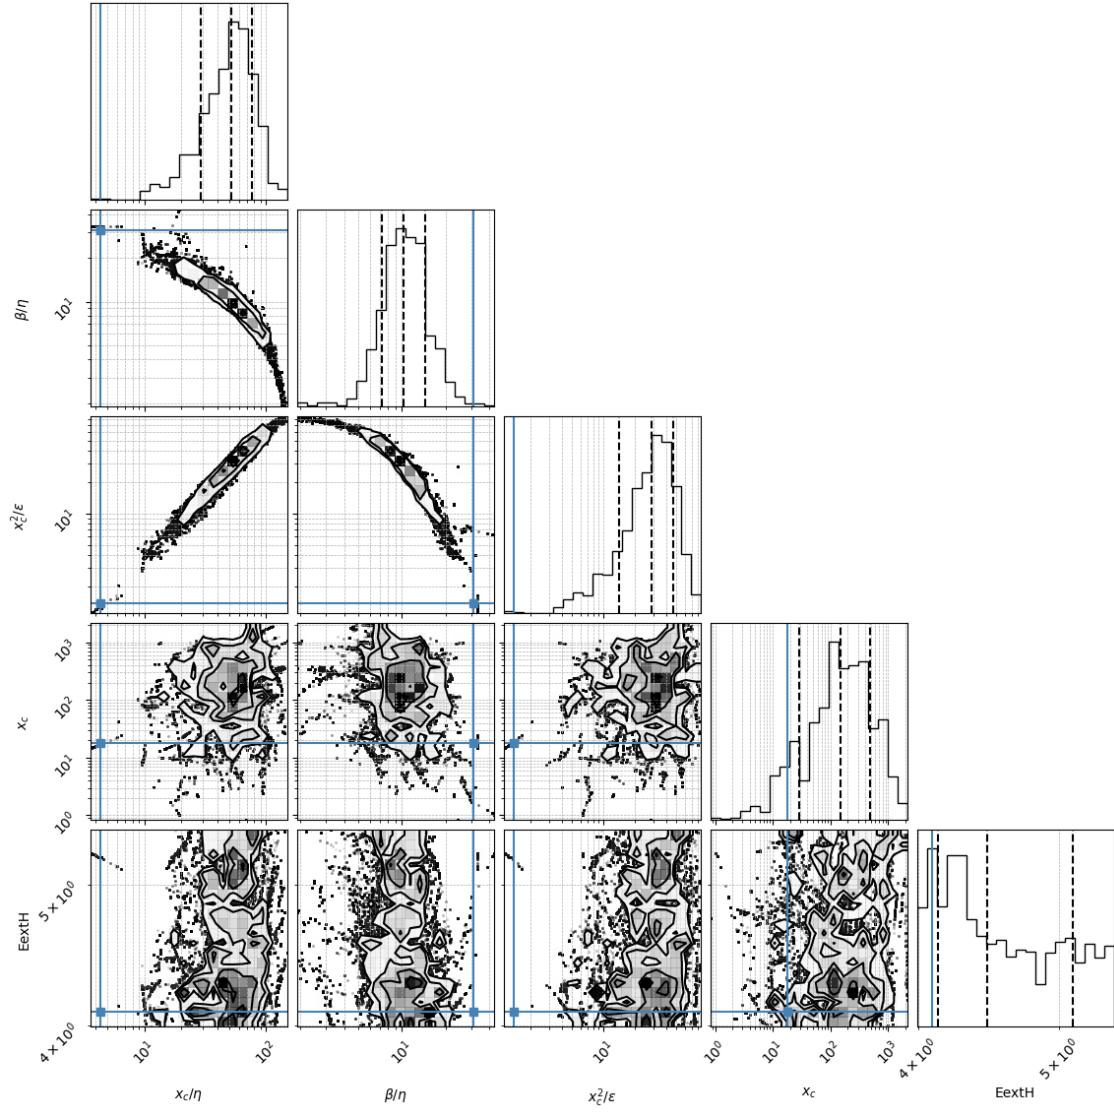

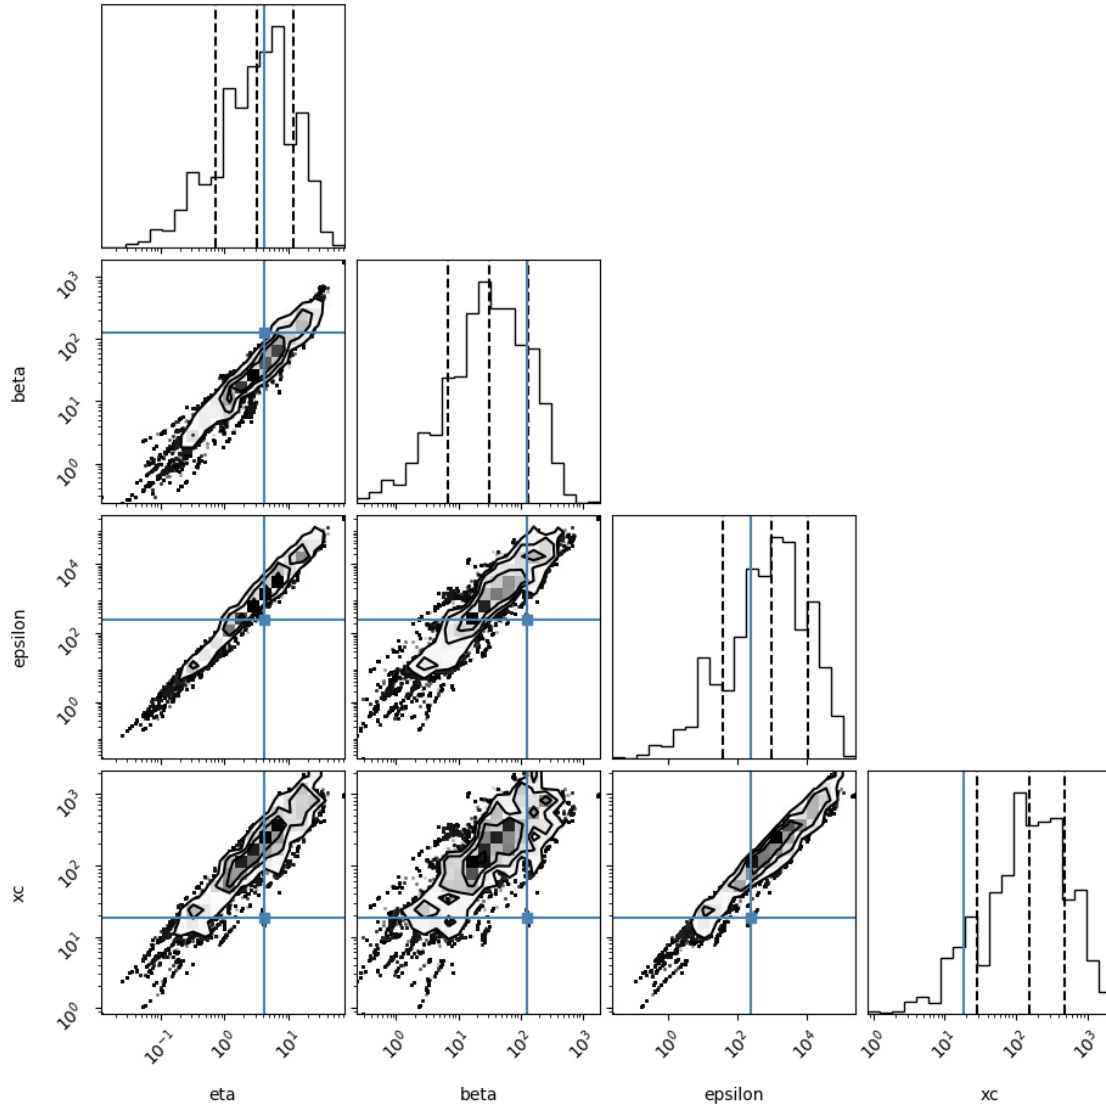

2   2. Heat map corner plot of raw samples

This plot shows all the raw sample points and their lnprobability
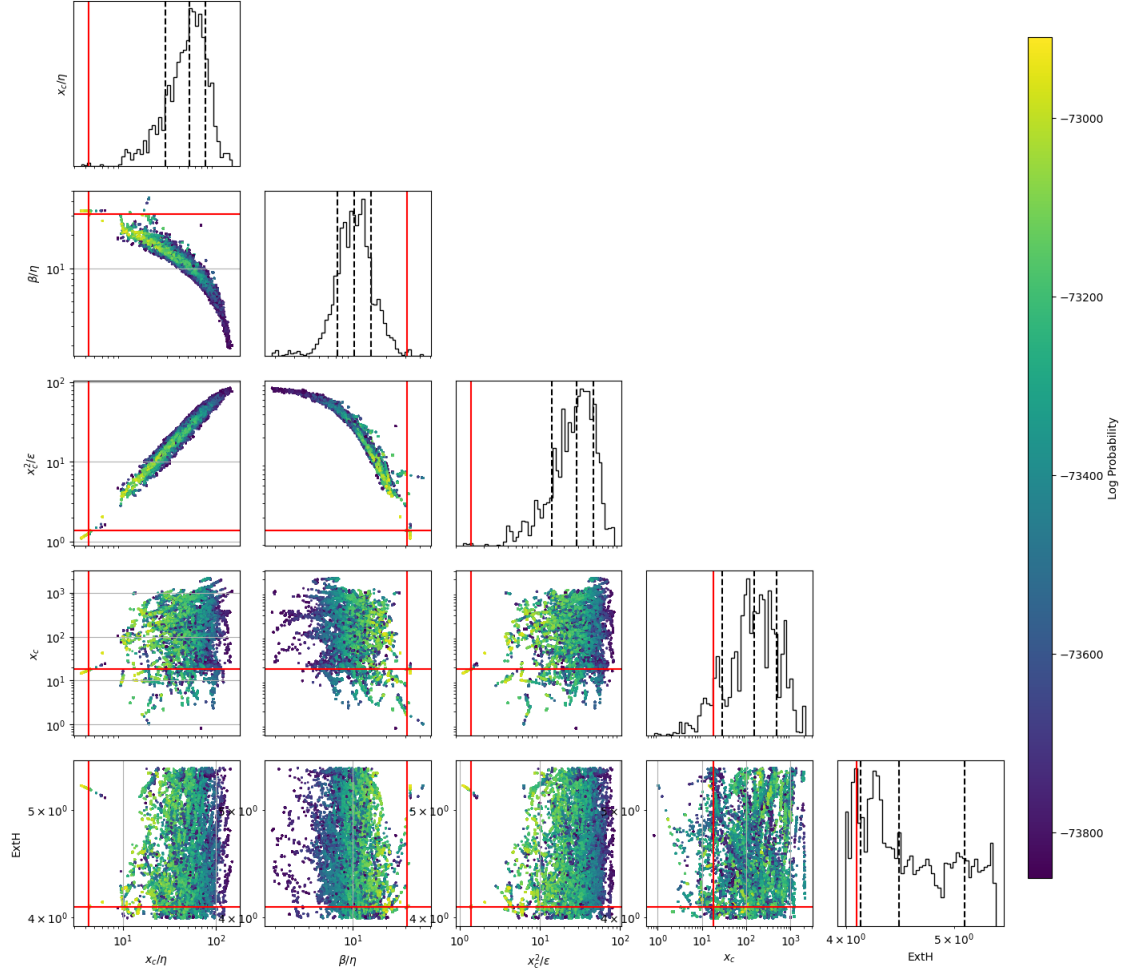

3   3. Posterior distributions of parameters

1d marginalizations of posterior distributions. we use a grid of size nbins=100-150

5
2D marginalizations of posterior distributions

2D Marginalized Posterior

```
Rescaling the samples TIME by 365
```

4   4. Table of results

mode is the marginalized mode, max_likwlihood is the sample with highest likelihood mode_overall is the 4D posterior mode
